

At PetLabs360™ our dedicated research and development staff works tirelessly to consistently improve upon our product line. Our mission is to offer only the highest quality, most palatable products with industry leading efficacy. We persistently review ingredients profiles, delivery methods and numerous other variables, and listen to you, our customers, to improve all aspects of all PetLabs360 items.

We recently made some exciting improvements to our product line that we would like to share with you:

- **DigestAbles®** We have increased the tablet and bottle size of our DigestAbles for Dogs products which now offer a more stable and efficient delivery system for these essential nutrients.

What you will notice:

Our 120ct and 250ct bottles and tablets have increased in size, which are now in line with the rest of the PetLabs360 canine chewable products.

- **New and Improved Flavor** We have boosted the beef and cheese flavor in each of our canine chewable tablets! As the industry leader in palatability, we have taken additional steps to ensure that PetLabs360 products are synonymous with high quality and ease of administration. Our latest testing shows that dogs are even more eager to consume the PetLabs360 new, advanced flavor formulas.

What you will notice:

PetLabs360 Beef and Cheese flavored chewable tablets for dogs are packed with more flavor than ever. The beef and cheese flavor is more evident and you will notice a sharper beef and cheese scent in the new tablets (so will the pets, who are even more eager to eat them up!).

We will continue to review our product line on a regular basis, always seeking to offer the most advanced supplements on the market.

Best regards,

The PetLabs360 Team
